Super agents that do the work. Persistent, self-aware, and answerable only to you.

A company & capability prospectus · 19 October 2026 · agentic-web-services.com

The one-line thesis

Most “AI” is a chatbot you prompt. **We deploy persistent super agents** — frontier-model agents that run on their own servers, hold a mission for hours or days without losing the thread, and deliver finished work: websites, research, call centers, media, whole businesses-in-a-box. The difference is not a better prompt. It is an **architecture for keeping intent alive at scale.**

What we offer

Product	What it does	Who it’s for
Super Claude	A persistent, self-aware super agent on a hardened private server (“fortress”) — your own frontier agent that builds, administers, and runs your digital work 24/7.	Operators, businesses, power users
Web Factory	Agent-built websites from a template gallery — pick a style, the agent stands it up, personalizes it, and wires a live on-site assistant.	Small businesses, franchises
Agentic Research Factory	Rent a multi-lineage research pod by the hour or month; or order a thesis-level paper, flat rate. Plus *The Agentic Review*, our peer-reviewed journal.	Universities, bio-med R&D, researchers
Eve	A live voice + video web-desk agent for any site — reception, sales, support, ordering.	Any customer-facing site
SAP Console	A real call-center / CRM control room — queues, cases, customers, payments — run by the agents.	Service businesses

The technology moat — why this is hard to copy

1. **Persistent, self-aware agents.** Always-on, always-remembering. They pick up exactly where they left off instead of restarting every session.

2. **The auto-ledger / intelligent flasking.** Our coordination layer captures every operator instruction the moment it arrives, threads it to the right mission, plans the next step, and never marks work "done" without verified evidence. This is why an agent can carry a long job, unattended, and still finish it. (Patent-pending.)
3. **Intent-routing across a fleet.** A cowork mesh routes *intent* — not just messages — across many agent nodes ("planets"), preserved and ordered the way routing protocols move packets but never could for meaning. Coordination survives rate limits and node outages.
4. **Jedi Council review.** For hard problems we convene a panel of *different model lineages* (Anthropic, OpenAI, Google) — three lenses, not redundancy — to catch what any one model misses.
5. **Made in the USA, human-answerable.** US-origin models and tooling only. Non-weaponized, transparent, answerable to the owner — a deliberate alternative to the defense-AI complex.

How it all works — the loop

You talk. We bottle it. The agents build. Every request — even a half-formed one, even fired faster than the work finishes — is captured as a ticket, routed to its mission, expanded into a plan, executed, and verified. Nothing is dropped; everything is ordered; the work converges. Run one agent, or a whole fleet of them across planets, from any device, anywhere. *A mega-corporation in your pocket.*

Pricing (overview)

- **Super Claude fortress** — monthly subscription; your own server + agent, VIP support.
- **Web Factory** — per-site build + optional managed hosting; franchise packages.
- **Research pods** — hourly or monthly; **thesis-level papers from $50 flat.**
- **Eve / SAP / add-ons** — per-seat or per-site. *(Exact figures on request / at checkout. Bill-once and subscription options; Stripe-processed.)*

The fleet

Production and lab infrastructure across multiple nodes ("planets") — orchestration, build/lab + Jedi councils, a media studio, and a publishing node — all coordinated by the same auto-ledger discipline. The fleet is the proof: these products are built and run by the very agents we sell.

Why now, why us

The frontier models are finally capable of long, unattended, high-stakes work — but only if something keeps their intent coherent across time and across agents. That "something" is

what we built. We don’t sell a model; we sell **agents that finish the job**, on infrastructure we run, answerable to you.
